

Aevrin Labs

An open builder community — learn, build, share, launch.

A place where builders come together to make things.

Aevrin Labs is an open builder community for developers, students, founders, designers and engineers. It brings free design resources, developer tools, reusable skills, templates and community-built projects into one place, so people can learn, build, share and launch faster, and keep giving back to a growing ecosystem.

What the brand must say

- **Open:** anyone can walk in, take, and give.
- **Modular:** many pieces from many people form one whole.
- **Collaborative:** builders working around a shared idea.
- **Experimental:** a lab, a place to try things.
- **Developer-native:** precise, plain, no hype.
- **Trusted:** a safe space for your work, code and ideas.

What the strongest builder brands teach us: Figma, Docker, Replit, GitHub, Hugging Face, Product Hunt and others don't draw every feature. Each owns one simple symbol that stands for a bigger idea: pieces coming together, a shared space, a place to launch. Aevrin Labs follows that rule.

The Loop: learn, build, share, launch, safely

An endless loop

One unbroken line that crosses over itself: learn → build → share → launch, then around again for the next builder. The community never stops moving.

A keyhole riding on it

The orange keyhole is the idea in motion, and a quiet promise: Aevrin Labs is a space you can trust with your work, your code and your ideas.

Soft, not sharp

Round head, gently pinched neck, wide base, no hard points. Security that feels welcoming, not locked down.

One line, one accent

Ink does the work; Signal orange marks only the keyhole. The same rule runs through the whole brand.

The logo family

PRIMARY — HORIZONTAL

REVERSED

DEVELOPER LOCKUP — GITHUB, DOCS, CLI

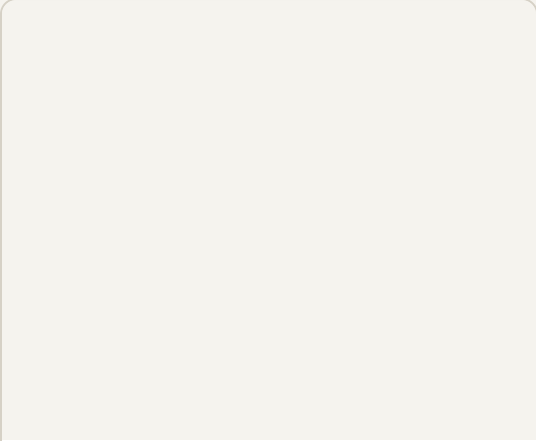

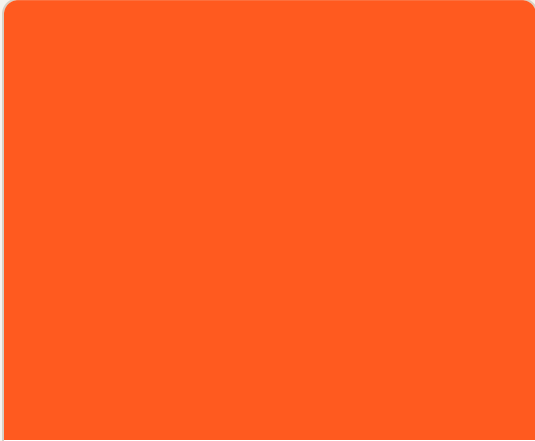

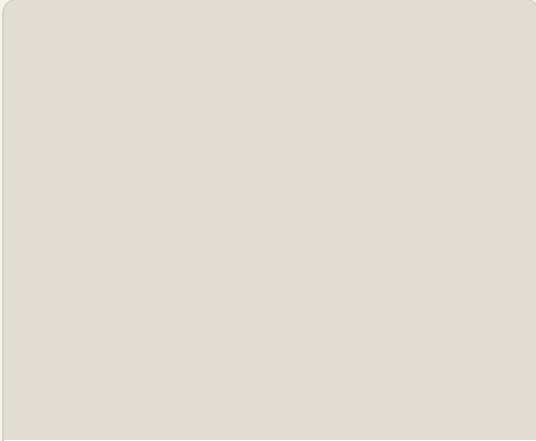

Use the primary horizontal logo by default. Stacked for square spaces; the symbol alone only where the name is already visible; the **aevrin/labs** lockup only in developer contexts (repos, docs, terminal UIs).

Built on a simple grid

- Drawn on a 64-unit grid. The loop is a single 8-unit stroke with round joins; its lobes are mirror images.
- The keyhole sits on the top of the right lobe and is cut out of the loop with a clear ring (2.8 units), so it works on any background. The keyhole is always Signal orange (ink or white in one-colour versions).
- **Clear space:** a quarter of the symbol's height on every side, also around full lockups.
- **Minimum size:** symbol 16 px (favicon); horizontal logo 120 px wide; stacked 64 px wide.
- The wordmark is lowercase **aevrin** (Space Grotesk Bold) + **labs** (Space Grotesk Medium), outlined, so no font is needed. In sentences, write **Aevrin Labs**.

Ink, paper, and one signal

				
Ink #121316 • RGB 18 19 22 Logo, text, dark grounds.	Paper #F5F3EE • RGB 245 243 238 Light grounds, reversed logo.	Signal #FF5A1F • RGB 255 90 31 The keyhole, CTAs, highlights.	Tint #E2DDD2 • RGB 226 221 210 Quiet fills, pattern tiles.	Graphite #2C2E34 • RGB 44 46 52 Pattern tiles on dark.

Ink and paper do the work; Signal orange marks the one thing that matters: the keyhole, the call to action, the launch. Keep it to about 10% of any layout. For orange text on light backgrounds use Signal Text #B93C0C (5.1 : 1).

Engineered, plain, readable

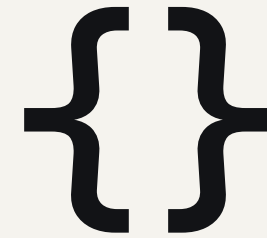

Aa

Space Grotesk

Headlines (Bold, -2% tracking), body (Regular), UI (Medium). Its engineered, slightly quirky shapes match the symbol.

Build it. Share it. Launch it.

Free design resources, developer tools, reusable skills and templates, all in one place.

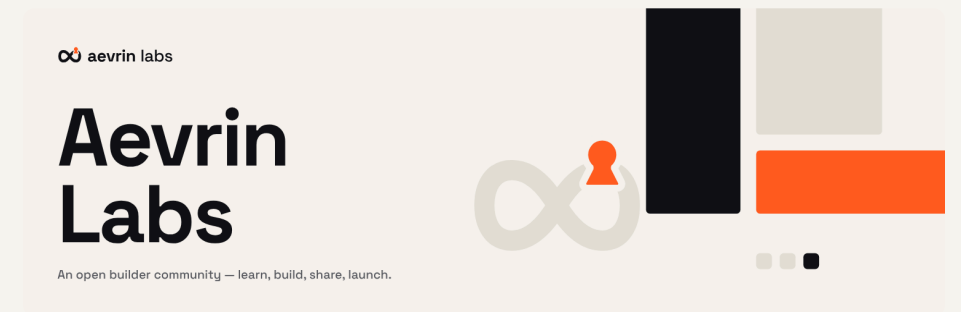

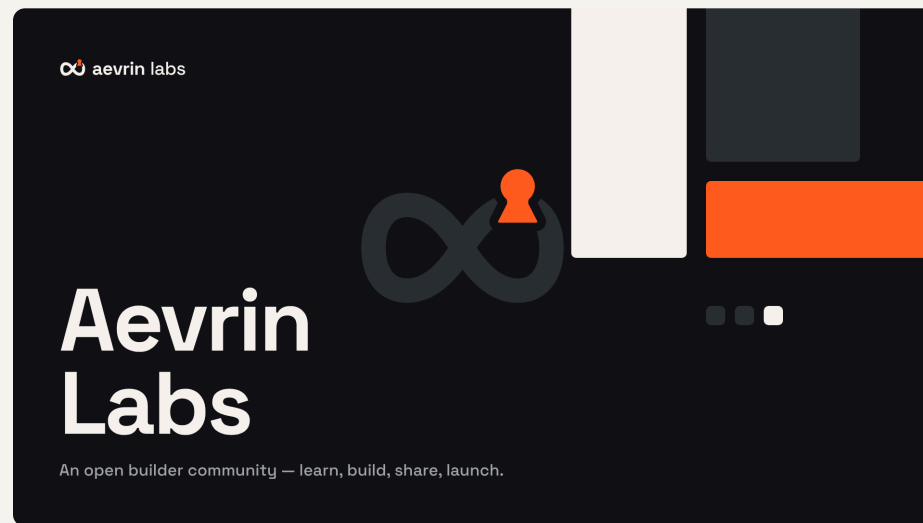

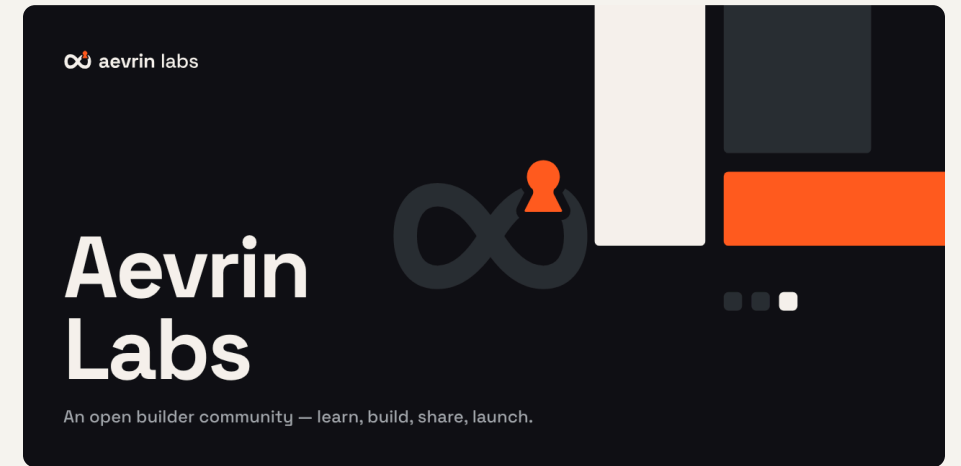

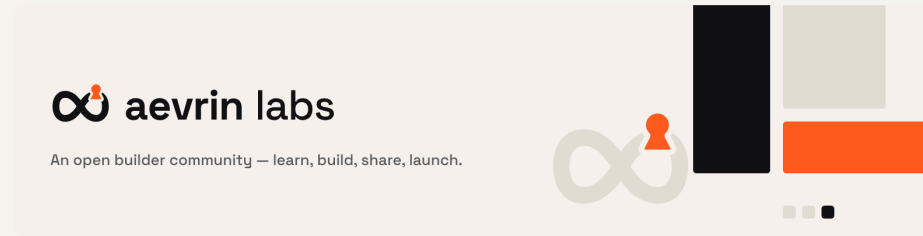

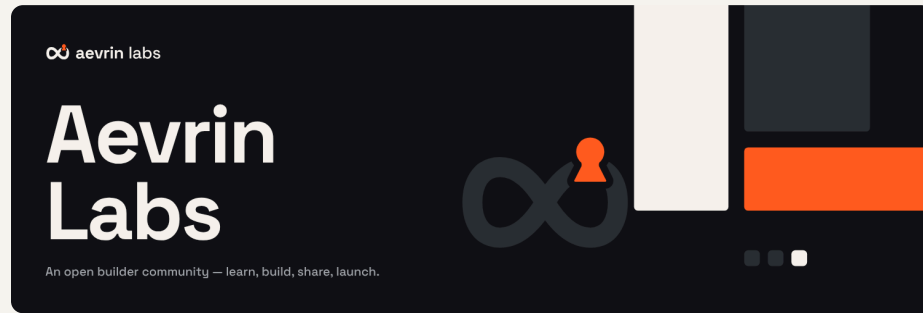

JetBrains Mono

Code, commands, tags and the developer lockup.

Pattern & banners

The pattern is the brand at scale: big ink, tint and signal blocks, plus the loop drawn large in tint with its orange keyhole. Keep the name on plain ground, bottom-left; blocks may bleed off the top and right edges.

Please don't

Rotate or skew the logo.

Recolour it. The keyhole is always Signal (or ink in mono).

Stretch or squash.

Add shadows, glows or gradients.

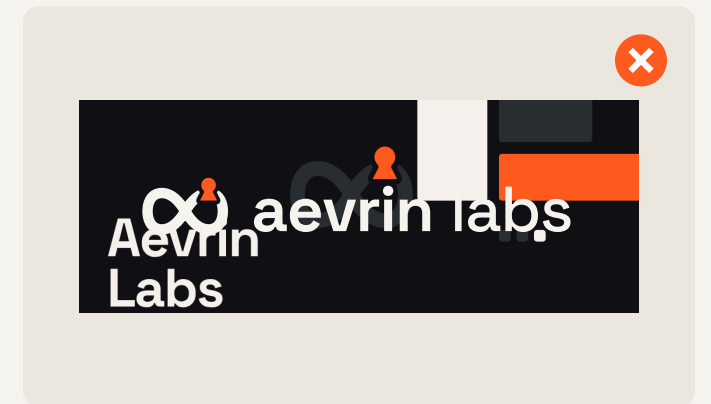

Swap the colours. Orange is only ever the keyhole.

Set the name in another typeface as a logo.

Place the colour logo on Signal. Use mono ink instead.

Put it on busy imagery without clear space.
